Dear Dr. Fernando Alvarez Noguera,

We wish to submit an original research article entitled “*Climate change impacts on endangered cloud forest tree species in Mexico*” for consideration by Revista Mexicana de Biodiversidad.

We confirm that this work is original and has not been published elsewhere, nor is it currently under consideration for publication elsewhere. Both authors agree with the contents of the manuscript and its submission to the journal. In this paper, we showed significant negative effects in terms of presence of threatened and endangered cloud forest trees in the face of climate change. Our work provides a set of geographic summaries that can be effective indicators for global change implications for the most threat ecosystem in Mexico.

We believe that this manuscript is appropriate for publication by Revista Mexicana de Biodiversidad because our paper is a quantitative assessments of species losses in cloud forest under climate change.

We have no conflicts of interest to disclose.

We suggest to Dra. Claudia Ballesteros Barrera to review this paper, she is expert in climate change and she work in the Universidad Autónoma Metropolitana, her email is: bbc0711@gmail.com.

Please address all correspondence concerning this manuscript to me at [daniel.jimenez@correo.buap.mx](mailto:daniel.jimenez@correo.buap.mx).

Thank you for your consideration of this manuscript.

Sincerely,

Dr. Daniel Jiménez-García
